Whether you are new to photography or photography enthusiast, it's helpful to have a basic understanding of the basics, and Photoshop is an excellent place to start. Note:This guide focuses on the basics of using the most commonly used functions and tools available within Photoshop. In Depth:Basic Photoshop Controls You can use Photoshop's basic tools and controls with or without a mouse. On the interface there are many more icons and shortcut keys, including the keyboard shortcuts. Photoshop has a control panel with tools and controls that you can choose to operate with the mouse, keyboard or both. The classic control panel has tools and controls that you can use with your mouse. With it, you access the menu or icons that are available when you click on the tools or containers. Some of the most common tools include the Arrange, Blur, Brush, Color, Curves, Directional, Eraser, Fill, Gradient, Lens Correction, Mask, Move, Rotate, Sharpen, Slider and Transformation tools. Navigating through tools and controls with the mouse is a handy way to edit images. However, if you prefer to use Photoshop with your keyboard or a trackball, the keyboard shortcuts may be more your style. These shortcut keys enable you to navigate through the UI of Photoshop and speed up your editing and saving time. You can also use the tools panel as the shortcut key panel. Select the tool or edit using the keyboard, and the control panel in the workspace changes to the tools panel. Of course, you can also use both the control panel and the tool panel with a mouse. The tool panel can be used to change tools, while the control panel allows you to choose tools and work within a canvas. If you are using Photoshop on a Mac, press Command-F5 to access the tool panel, and if you are using it on a PC, press Ctrl-F5. The tool panel can be accessed from the menus, by choosing Window | Toolbars. To do this, press the F button next to the Menu button. With the tool panel open, choose a tool from the tool panel. You can also navigate to a tool by typing the name in the blank space in the tool panel. This opens the tool panel, and the tool will appear in the list. If you need to find a tool to quickly, simply type the name into the blank space in the toolbar or type in the Filter Gallery

I know that.animate() has one parameter called duration which are the units you want to animate by. The animate function is useful because the duration you specify is the amount of time an animation takes to complete. I also know that the.animate() function allows the user to specify the ease function. See this example: $(".box").animate({backgroundPosition:"500px 500px"}, 2000); But I wanted to know why the following piece of code is the same as the above? $(".box").animate({backgroundPosition:"500px 500px"}, function(){ alert("Done animating"); }); A: The set of parameters that you can specify in the.animate function are a combination of the duration, the callback function that will receive the arguments the element passed when the animation is complete, and other options. If you want to supply the function as an argument of the animate function, you can do it like that: $(".box").animate({backgroundPosition:"500px 500px"}, 2000, function(){ alert("Done animating"); }); That's equivalent to $(".box").animate({backgroundPosition:"500px 500px"}, 2000, function(){ alert("Done animating"); }); And when you want to specify the function as the third parameter of the animate function, you can do it like this: $(".box").animate({backgroundPosition:"500px 500px"}, 2000, {

Otto Roessler Otto Roessler (1900–1969) was a German neurologist who was named to the German Reich Ministry of Justice by Adolf Hitler in 1941. Roessler was born in 1900. He studied at the universities of Marburg and Heidelberg. He served as an army doctor during World War I, and was wounded twice. After the war he continued his work at a private clinic in Heidelberg, where he established himself as a leading neurologist. In 1934, he was made head of a new neurological hospital in Tübingen, where he eventually established the Neurological Institute. In 1938 he was named director of the Institute of Neuropathology and Neurology in Heidelberg. In 1941, Hitler appointed Roessler to the newly created Reich Ministry of Justice, and he became the deputy minister. Roessler published more than 200 scientific papers, and his books included the first German textbook on neurology. He was an early and outspoken opponent of the Nazi racial doctrines, and was active in fighting against the Nazi euthanasia program.
